

Vote Andrew for Research Director!

A bit about me

My name is Andrew, I am a current year 3 medical student with a strong aspiration for a career in surgery. I am passionate for surgery almost as much as I am for football and Liverpool FC in particular (sorry united fans) and I also have a passion for research. My hobbies include football, running, gym and going out. I have been a Cutting Edge Society member since first year and have participated in numerous events such as the suturing series, the cutting edge conference and the recent research series.

Why vote for me?

I think you should vote for me for research director as firstly I'm passionate about research and have experience in the research area with me currently being involved in a RCT on symptom reporting tools for breast and colorectal cancer. I will be working with a research team throughout the summer on this project and I hope to write my own systematic reviews alongside this for the project. With this experience and large network, I hope to get other medical students involved in research and facilitate this process, as I know first hand it can be difficult to initially get involved.

I am also a long-time cutting-edge member and have been active in many aspects of the societies as mentioned previously and shown by some images I have taken from past events.

What Ideas Do I have?

I have many ideas for Cutting Edge as Research Director which have come from my own experience in the society and as a medical student trying to get involved with research:

1. Facilitation with the Mentoring scheme which I am currently apart of.
2. Provide a researching series from researchers, clinicians and medical students on how to get involved with research as a medical student and a future career in the area.
3. Hold research competitions/events for people to present their own posters and research at, as well as essay competitions
4. Also research workshops, networking events, conferences and MUCH MORE

So if you found my application appealing then please vote for me! Thank you 😊
