Disabled Student Support Summary

Disability Information

Disability	Attention Deficit Hyperactivity Disorder (ADHD)
------------	---

Context and impact

Ilana has a diagnosis of ADHD. Students with ADHD commonly experience the following:

- Inattentiveness – both in receiving information and producing work
- Hyperactivity
- Impulsiveness
- Difficulties processing, understanding and retaining information
- Differences in executive function (thinking, planning and undertaking tasks)
- Restlessness, speaking out of turn, interrupting others
- Forgetfulness
- Regulating mood requires additional effort
- Difficulties managing stress

They may need support with:

- Staying on task and maintaining focus
- Starting and finishing tasks
- Organisation – self and studies
- Understanding and interpreting instructions and assignment briefs
- Managing conflicting demands
- Confidence
- Using communal study spaces

Issues may be more pronounced in busy environments or when managing multiple priorities.
