

Football, History, and Socials? Oh, go on then.

I would love to be History Football Secretary. Like many who play the sport, I've been obsessed with it all my life. I've never not played footy, if that makes sense, it's been a constant for as long as I can remember. I've played in the social league the whole time I've been at university, so I know what to expect.

What I'll bring:

My details:

Ollie Beaven

Hy20o2b@leeds.ac.uk

- **Training.** The perfect chance to jell as a group and to improve our footballing standards collectively. I hope to do this once a week.
- **Socials.** Having a laugh is without doubt the most important thing, on and off the field. I've got some great ideas for nights out and pre-match/night-out games. Ultimately, I hope to
- create opportunities for people to meet others, but most of all, to just have a laugh.
- **Kits.** We already have great kits and I hope to add to the attire. Some training tops is something I'd love to bring in.
- **Match report.** To be written after each game.
- **My expectations.** I will encourage all to get involved in both matches, training, and socials. I want everyone to have a say on what we should do too as a team, I always want to hear from others and what they think is best. If deadlines are looming or if people are just not up for it, that's totally ok! The whole point of taking up this role is to create some time and space to give people a break from university and play some footy.
- **Anyone can get involved.** Obviously if you do history that's great, but if not, then it's ok! They'll just have to cope with MHRA rants. Brentford and Chelsea supporters will be sat down and asked how that accident came to be before putting on an History jersey.

Antics aside, if I got the role, I'll do my best to uphold all that I've laid out. Obviously, you can only have a certain amount of people on a football pitch, but I'll always be rotating. Coming to support the team and getting involved in socials are all equally as important as actually playing the sport.
